

Hairbooms and Oiled Wildlife Rescue Supplies Urgently Required!

Nearly three-quarters of all US waterfowl – and all its 110 species of migratory neo-tropical songbirds – use Louisiana's three million acres of wetlands to rest or nest. Do you watch birds flying north in the early spring? Do you listen to songbirds in the morning?

In order to keep what we have up here, we need to protect what is at stake on the Gulf Coast. Will you send your washed hair clippings from the salon? Will you send used pantyhose from your forgotten dresser drawer?

Hairbooms are made of washed hair from your salon, free of trash hopefully, and stuffed into pantyhose to make long strands of super absorbent oil booms. They can be washed and reused as well. Many of the booms currently deployed are made from petroleum-based products which seem a little silly right? The hair you usually throw away can save critter's lives and a precious ecosystem. Please help.
